

For dairy cows, suckler cows and sheep

Rumag Aqua

Fast-acting, soluble magnesium supplement for addition to drinking water to help prevent grass staggers (hypomagnesaemia). Use from 2 weeks pre-turnout for 6-8 weeks at 0.33 litre per cow per day for best results. Also suitable for lactating ewes at 0.5 litre per 10 ewes* per day.

Analysis	
Magnesium %	5
Litres/tonne	833

Tecmag 4

Highly palatable molasses based liquid with added soluble magnesium to help prevent grass staggers (hypomagnesaemia). Can be offered free access from ball/wheel lick feeders or poured onto daily ration at the rate of 0.5 litre per cow per day or 0.66 litre per 10 ewes* per day.

Analysis (DM basis)	
DM %	69
Sugars %	38
Magnesium %	4
Litres/tonne	740

* Magnesium products should only be fed to ewes post lambing

Flexibulk

Liquid Feeds

A range of liquid feeds available in 1000 litre containers formulated to cover a wide range of needs on farm.

Energy and protein liquids

To complement and improve the ration, these liquids offer a range of benefits to the livestock farmer:

- An energy boost to stock in the form of readily available 'sugar'
- Increased forage utilisation – improved forage digestion, making the most of grass and forage
- Increased feed intake – promotes feed intakes and improved performance
- Increased ration palatability – suppresses dust, binds home mix diets, masks less palatable feeds, ensuring all the diet is eaten
- Improved rumen function – molasses 'sugar' stimulates rumen bugs ensuring feed is digested effectively

Magnesium products

Help reduce the risk of grass staggers (hypomagnesaemia). Available in two forms:

- Molasses based magnesium rich liquid
- Soluble magnesium for adding to water

Both forms are equally effective in providing supplementary magnesium.

Techmol and Techpro liquids:

Energy, natural protein and urea supplements to complement forages for cattle and sheep

Tecpro Balancer 45

A high protein supplement based on our unique bonded 'slow-safe release' urea for use in rations containing maize silage, fermented whole-crop, hay and straw. Provides a concentrated level of effective rumen degradable protein to improve utilisation of forage and roughage. Add to rations at up to 2 litres per cow per day or 1 litre per 10 ewes per day. (It is recommended that this product is not fed free access to sheep). Introduce gradually into the ration.

Tecmol Plus

Natural protein liquid, which combines effective rumen degradable protein with sugar energy for improved rumen function and diet utilisation. Use with poor quality grass silage and at pasture where extra performance is required. Offer free-access or poured on to daily ration at up to 2.2 litres per cow per day or 2.0 litres per 5 ewes per day.

Tecmol Energy 22

A high-energy liquid based on molasses, syrups and natural protein for use with all types of forage when extra energy is required. Can be offered free-access or added to rations at up to 2 litres per cow per day or 2.5 litres per 5 ewes per day. Ideal for adding to home-mixes at up to 40 litres per tonne.

Tecmol Super

A combination of molasses, natural protein, urea and bonded 'slow-safe release' urea for free-access supplementation at grass and with silage; or for addition to home-mixed rations for cattle and sheep where extra protein as well as energy is required. Use at up to 2 litres per cow per day or 2 litres per 10 ewes per day. Recommended addition rate to home mixes is 40 litres per tonne
