

This unique supplement is specially formulated for horses and ponies and provides selected feed nutrients, minerals, vitamins and specific feed additives, proven to be beneficial to equines.

## Top five reasons for using SUPAlyx Horse and Pony

- When your horse or pony requires building up or is in poor body condition or coat bloom, if the hooves have poor structure, if weight is difficult to keep on and if the animal tires quickly after light work.
- All young animals and lactating mares benefit from extra supplementation at pasture.
- When your current supplement or digestive enhancer is not giving the results you want or if it induces feed refusal.
- When your horse or pony suffers from metabolic problems such as colic, tying up or laminitis, SUPAlyx contains less molasses than cooked molasses licks.
- If your current ration is based on high levels of forage or grazing and if you are using straight feeds.

## How to feed SUPAlyx

- SUPAlyx comes in an easy to handle 12.5kg bucket.
- Allow 1 SUPAlyx for up to 5 horses or ponies.
- Provide feeding points away from drinking water as closer proximity to water can increase consumption.
- If fed outside to a group of horses position the access points over total grazing area and move regularly to prevent localised pasture damage.
- Indoors restrict access to a few hours per day.
- Ensure adequate forage or grazing is always available.
- Daily intakes may be up to 400g per head, but this is influenced by many factors such as other dietary feeds used, forage quality, work load, age and size.

### Specification

Protein% 13, Oil% 1.1, Fibre% 1.3, Ash% 25, Calcium% 4.5, Phosphorus% 0.7, Sodium% 3.5, Magnesium% 1.0, Selenium\*mg/kg 4, Cobalt mg/kg 5, Iodine mg/kg 4, Vitamin A iu/kg 150,000, Vitamin D3 iu/kg 15,000, Vitamin E iu/kg 500, Manganese mg/kg 500, Zinc\* mg/kg 1500, Copper\* mg/kg 200, Biotin mg/kg 40. + VITAMINS K, B1, B2, B6, B12, FOLIC ACID, NIACIN and PANTOTHENIC ACID

\* includes organic form of selenium and chelated zinc and copper

# SUPAlyx

## Horse and Pony

## Nutritional Requirements

### Protein

This is the primary nutrient needed for the formation and repair of muscular tissue. It is more important for young, working and growing horses and lactating mares than it is for mature animals used for leisure only. Full-fat soya protein (non GM) is included in this formulation because it is a rich source of the essential amino-acid lysine.

### Minerals & trace elements

This group of nutrients has many important functions for horses and ponies. The major minerals such as calcium, phosphorus, sodium and magnesium are all involved in bone, teeth and skeletal structures, important for young and growing animals. Trace elements are included because they are involved in the body's regulatory processes such as hormone and enzyme production for metabolism. Selenium, copper and zinc are added in the organic or chelated forms, which ensures they are absorbed more efficiently into the horse's blood stream than conventional salts.

### Vitamins A, D3, E, K and B group

Vitamins are natural compounds required in very small amounts but nonetheless play an important role in the control of metabolic functions. Both fat and water-soluble vitamins are added to SUPALYX to provide a complete range that negates the need for further supplements.

### Diamond V XPLs Yeast Culture

This natural product improves hind gut fermentation. This allows for better feed utilisation and supply of nutrients for absorption to the animal.

### Biotin (Vitamin H)

This special vitamin has been shown to complement zinc and digestible protein to help improve hoof integrity and durability.

### Garlic

A natural herbal supplement ideal for the support and maintenance of the circulatory, respiratory and digestive systems

## SUPALyx Horse and Pony feed licks

### SUPALyx Horse and Pony Benefits

- Free-access nutritional lick feed designed for supplementation of pasture and forages and contains essential nutrients deficient or missing from many forages that complement hard feeds
- SUPALyx Horse and Pony is the foundation supplement for versions shown below

### SUPALyx Horse and Pony Easy Breather

#### Additional Benefits:

- Has a soothing action from a carefully selected blend of plant aromatic essential oils
- Contains plant extracts to naturally stimulate the immune system and provide vitamin C
- Helps decrease irritation of the trachea and offers relief from dry and loose coughs and colds

### SUPALyx Horse and Pony Garlic

#### Additional Benefits:

- Garlic may help increase your horse's appetite and improve digestive function
- Garlic may help keep flies, gnats, and mosquitoes away and may help reduce parasitism
- Garlic naturally contains Methylsulfonylmethane (MSM), a supplement that is commonly used for joints and allergies

### SUPALyx Horse and Pony Nimble

#### Additional Benefits:

- Helps horses with joint and movement issues
- Contains carefully selected supplements including Glucosamine HCL, Methylsulfonylmethane (MSM), Cod Liver Oil and Biotin
- Feed as part of your training and management programme
