

## **NEW BADGER BEATER FEEDER**

Rumenco has developed a new cattle feeder that keeps forage supplements for grazing and housed livestock well out of reach of badgers.

The new 'Badger Beater' feeder ensures Rumevite blocks, buckets and tubs are offered to cattle a metre above ground – the DEFRA recommended badger-proof feeding height. The feeder is also useful for feeding specialist cattle supplements in mixed grazing situations because sheep are unable to reach the feed.

The feeder is made of durable recycled plastic and is filled with water to prevent it being knocked over. When full of water the feeder weighs around 200kg so is for mechanical handling only. Rumenco recommends one feeder for every 30 cattle.

The new feeder on farm price is £70 and further information is available from Rumenco on 01283 511211.
