Commercial Swine Supplements

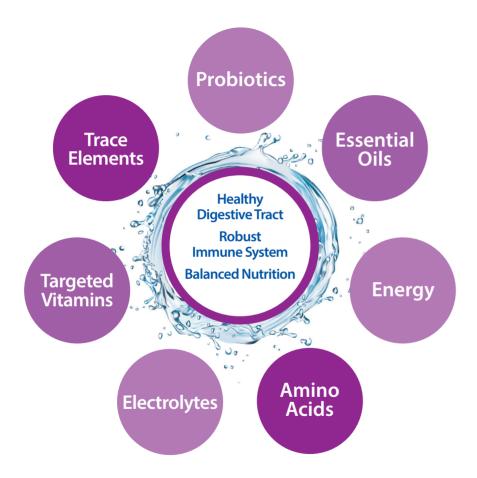

To get the best production from your Swine herd, you need to ensure all the conditions are optimal to allow the pigs to achieve their full genetic potential.

Maximising growth rates and food conversion is essential in ensuring a profitable rearing herd. It is also critical to attend to the physiological and metabolic requirements of the breeding herd for the long term productivity of numerous healthy piglets.

The Nutri Range of advanced swine supplements is specifically designed to support the critical early life stages, maximising growth and delivering peak performance. However, the Nutri Range ensures there is a product suitable for all stages of production,

whether it's supporting routine management, or targeted use to deal effectively with issues when they arise. The Nutri Range of Swine Supplements deliver essential nutrients to support the pigs of all classes for improved health and profitability of the herd.

Energy. Ensuring adequate energy is critical in early stages of life to promote feeding and utilisation of nutrients. At times of stress or disease easily available energy helps pigs to continue growing without setbacks.

Antioxidants. Natural antioxidants support the development of a healthy immune system early in the pig's life, promoting development and protection from disease.

Trace Elements. Trace elements ensure optimal physiological functions vital for growth, health and reproduction.

Vitamins. Vitamins are critical for a wide range of purposes throughout a pig's life, whether it's Vitamin A for strong growth or Vitamin E for the immune system.

Amino Acids. Essential for the development of protein, a balanced supply of important amino acids helps lean growth, weight gain and overall productivity.

Electrolytes. At times of stress, electrolytes promote water consumption and avoids dehydration.

Probiotics. Carefully selected strains of bacteria help establish a healthy gut flora promoting growth and performance in early life or after antibiotic treatment.

Essential Oils. Proven to stimulate feed intake, nutrient digestion and the modulation of gut microflora to maximise health.

Combatting Biofilm

Biofilm build-up in drinking lines poses a significant health risk in swine herds. Pathogenic bacteria can build up on surfaces forming biofilms that protect them and make them hard to eradicate. Reduction of the build-up is key to helping keep lines clean and reducing bacterial challenge. Sugars, present in many products, potentiate biofilm formation when added to the water system leading to increased problems. Many of The Nutri Range swine supplements are specifically formulated to be sugar-free to help in the fight against biofilms. Look out for the Sugar-Free logo on pack.

Complementing responsible antibiotic use

There is continuous and growing concern over the use of antibiotics in pig production, either for use as growth promoters (in some regions of the world) or for the treatment of clinical conditions. Rumenco Group are committed to responsible use of antibiotics and supporting the swine industry to help ensure continued performance and productivity.

By supporting the early development of a healthy immune system, and a healthy gut flora, pigs are better prepared to face disease challenges and so the use of The Nutri Range of products, in suitable circumstances, may help reduce the likelihood for antibiotic intervention.

Maximising productivity

Ensuring a healthy digestive system and all the key elements of a balanced diet in turn leads to improved feed intake and conversion. Pigs grow faster and more evenly, improving overall efficiency and reducing days to slaughter.

Supporting herd management

Vaccination, transportation and other elements of herd management can stress pigs at critical times. The Nutri Range can support pigs through these times avoiding disruption to growth and setting them up for their future performance.

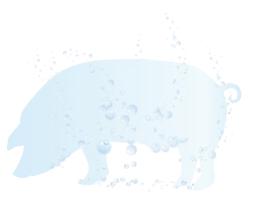

Help in times of stress

Excessive heat, disease outbreaks or housing issues can all stress pigs, leading to poor food intake and dehydration. Antibiotic therapy can damage the pigs' natural gut flora post-disease outbreaks leading to further poor performance. The Nutri Range has a product suitable for any of these conditions, whether it's, rehydrating after heat stress or re-population of the gut flora by probiotics after disease.

Planned and strategic use

The Nutri Range of products ensures that a program can be developed for any herd, tailored to their specific needs and challenges. Routine support through the pigs' life together with strategic use when problems arise will maximise performance and productivity. For further information and guidance on developing a program:

- Consult the individual product information in this brochure
- Discuss with your veterinary or nutritional advisor
- Go to www.rumencogroup.com

"NUTRIRANGE

Scientifically developed to support and supplement swine through all stages of production. Providing essential nutrients to help maintain health, combat stress and boost herd performance.

Specifically formulated for swine to help maximise farm productivity

ICON GUIDE

Gut function and digestive health

development

Immune function

NutriPiglet Care

Provides a concentrated energy boost and colostrum supplement for new-born and weak piglets to encourage suckling and aid energy reserves, vitality and body warmth. Highly concentrated proteins help assist natural defences against common disease challenges.

Pack sizes: 100ml

NutriPerform WSP

Vital strategic nutrition including probiotic for strong early development and optimised gut function in water soluble powder form.

NutriPhyte

Natural phytobiotics including oregano oil and vitamin E designed to optimise intestinal health, promote growth rate and improve feed utilization. Ideal for lactating sows and newly weaned piglets.

Pack sizes: 150g, 1kg, 5kg, 10kg.

Pack sizes: 1 litre, 5 litre, 10 litre, 25 litre.

RUMENCO GROUP

Pig Stop Bite

A violet coloured spray with a bitter taste designed to prevent further tail biting, a vice seen in growing pigs. Contains highly effective germicidal agents that sanitise, promote and support quick healing of minor wounds.

Pack sizes: 500ml

Pack sizes: 1 litre, 5 litre, 10 litre, 25 litre.

NutriStress

A premium blend of natural plant extracts and magnesium for strategic use in piglets, sows, finishers and boars of all ages to help calm aggressive behaviour and reduce stress.

NutriVital E + Se

A concentrated liquid blend containing Vitamin E and Selenium for strategic use to help relieve metabolic stress related challenges as well as optimising performance and supporting healthy immune function.

Pack sizes: 1 litre, 5 litre, 10 litre, 25 litre.

NutriLyte Pig

A palatable blend of immediately available energy, essential rehydration and betaine for strategic use in the nutritional management of piglets, growing pigs and sows to optimise productivity by stimulating feed intake.

Pack sizes: 1 litre, 5 litre, 10 litre, 25 litre.

NutriVital ADE 100-10-50

Highly concentrated blend of vitamins A, D₃ and E optimising health, growth and reproductive function.

NutriVital ADE 50-5-20

Contains key vitamins A, D₃ and E to optimise health, growth and reproductive function.

NutriTonic

A wide ranging complement of vitamins, mineral and amino acids to support healthy growth, reproduction, immunity and minimise the effects of stress.

NutriVita WSP

A multivitamin, mineral and trace element water soluble powder designed to encourage strong growth, healthy development and optimise reproductive function.

Pack sizes: 1 litre, 5 litre, 10 litre, 25 litre.

Pack sizes: 1 litre, 5 litre, 10 litre, 25 litre.

Pack sizes: 1 litre, 5 litre, 10 litre, 25 litre.

Pack sizes: 150g, 1kg, 5kg, 10kg.

RUMENCO GROUP COMMERCIAL PRODUCT GUIDE

NutriVital D Plus

Contains highly absorbable 25-OH Vitamin D₃ with double the activity of regular Vitamin D₃ formulated to support rapid growth.

NutriMax D3

Essential Vitamin D₃ for bone development.

Pack sizes: 1 litre, 5 litre, 10 litre, 25 litre.

SSS

Pack sizes: 1 litre, 5 litre, 10 litre, 25 litre.

GUIDE TO USE

ensures that a program can be developed for any herd, tailored to their specific needs and challenges. Routine support through the herd's life together with strategic use when problems arise will maximise performance and productivity. For further information and guidance on developing a program contact Rumenco Group or discuss with your veterinary or nutritional advisor.
